

CENTRUM SZKOLENIA ZAWODOWEGO

Vocational Training Centre has been established in 2003. As a Foundation we aim to support the industrial insulation industry and provide well-trained and qualified staff.

In recent years there has been a serious shortage of appropriate personnel in Poland as well as in Europe. One of our goals was entering industrial insulation fitter and sheet metal worker occupation into the Classification of Professions. Thanks to the entry these two essential occupations could be taught in Poland. Since 2003 we have successfully trained many insulators and sheet metal workers.

Our staff are highly qualified professionals with many successful years of experience and authors of the curriculums at Polish vocational schools

Our Centre contains air-conditioned classrooms, well-equipped workshop with various dummies and work stations as well as the support area. All audits and accreditations confirm good suitability of our facilities.
